Summary

Computational scientist combining machine learning, agent-based modeling, and urban systems research to model fine-grained human movement. Uses LLMs to convert unstructured policy text into analysis-ready data. Trained in microbiology and eco/evo theory, with active interest in biodefense and biosecurity policy.

Education

Aug. 2017 – Sep. 2024	University of Pennsylvania , <i>Ph.D., M.Sc. in Biology</i> Dissertation title: <i>Community Ecology of the Gut Microbiome</i> . Advisor: Dustin Brisson
Aug. 2008 – Dec. 2012	North Carolina State University , <i>B.S. in Animal Science</i>

Professional Experience

Sep. 2024 – Current	Penn Institute for Urban Research Position: ORISE Postdoctoral Fellow <ul style="list-style-type: none">Building and evaluating computational models of fine-grained pedestrian movement in cities using cell phone mobility data and built-environment features.Developing a tree-based machine learning pipeline (Random Forest, LightGBM, XGBoost, etc.) in Python that stacks and ensembles models to decrease error.Using an agent-based modeling framework in Python to simulate pedestrian decision-making and test movement assumptions under controlled scenarios.Established a research collaboration between Penn IUR and Oak Ridge National Laboratory.
Aug. 2023 – May 2024	Wharton, University of Pennsylvania Position: Research Associate <ul style="list-style-type: none">Applied stacked ensemble machine learning models to predict zoning restrictiveness from built-environment features. Improved error by 8% +.Developed an LLM-based pipeline to extract structured variables from unstructured municipal zoning ordinances.Communicated technical methods and results to interdisciplinary and non-technical executive-level stakeholders to support decision-making.
Aug. 2022 – May 2023	Perry World House, University of Pennsylvania Position: Graduate Fellow <ul style="list-style-type: none">Worked at the intersection of scientific and policy challenges in modern biodefense and biosecurity, writing policy-facing essays on pathogens of enhanced pandemic potential and dual-use research of concern (PEPP/DURC).
Jul. 2022 – Sep. 2024	Adaptive Cities Working Group Position: Scientific Advisor (Ecology and Simulation Design) <ul style="list-style-type: none">Interdisciplinary working group, in partnership with the Rockefeller Foundation and the Brookings Institution, focused on using digital twins to address the intersection of cities, heat waves, and health.Played key role in technical project design and considerations for digital twin implementation.
Aug. 2017 – Sep. 2024	Department of Biology, University of Pennsylvania Position: <i>Ph.D. Candidate</i> <ul style="list-style-type: none">Built and validated a highly controlled experimental microbiome system for studying host-associated community dynamics.Applied ecological theory (community assembly, stability) to the gut microbiome.

Scientific/Technical Leadership

- **5 Years** Led multiple scientific teams (<= 6 researchers), across disciplines (e.g. biology, data science, etc.)
- **4 Years** Advised trainees across career stages (2 master's, 3 post-bacc, 7 undergraduates, 2 high school).

Select Personal Projects

Executive Action Summary Mailer (Python)

- Converts executive actions (executive orders, memorandums, etc.) from the White House webpage to text files, passes them to Open AI's API for a terse, structured summary, and emails it.

NYT Letter Boxed Solver (Python)

- Searches for a minimal chain of words that use every letter provided, where each word starts with the last letter of the previous word and no adjacent letters come from the same side. Built a custom word bank by parsing text files from Project Gutenberg.

Skills

Coding	Python, R, Java, LaTeX, HTML
Technology	Git/Github, Jupyter, Anaconda, Overleaf, Netlogo
AI/ML/Stat.	Random Forest, Gradient Boosted Models, Stacking, Ensembling, Agent-Based Models, Probability Theory, Graduate TA for university statistics (twice)
Communication	Writing Strong ability across academic, policy, and general audiences. Speaking Skilled at presenting technical material for academic, policy, executive, NGO, and public audiences.

Research Publications

- ① A. Johnson, "Community ecology of the gut microbiome," Ph.D. dissertation, University of Pennsylvania, 2024.
- ② B. Raynor et al., "Movement patterns of free-roaming dogs on heterogeneous urban landscapes: Implications for rabies control," *Preventive veterinary medicine*, vol. 178, p. 104 978, 2020.
- ③ R. Castillo-Neyra et al., "Reemergence of canine rabies in complex urban environments: Lessons from an outbreak in arequipa, peru," in *American Journal of Tropical Medicine and Hygiene*, vol. 97, 2017, pp. 578–578.

Fellowships, Awards, & Achievements

2024	ORISE Postdoctoral Research Fellowship , Enhanced Computational Modeling of Human Navigation in Urbanized Environments, \$200,000
	Schmidt Science Fellowship Nominee , University of Pennsylvania
2022	Perry World House Graduate Fellowship , University of Pennsylvania
	SASGov Research Student Grant , University of Pennsylvania, \$2,000
2021	GAPSA-Provost Fellowship for Interdisciplinary Innovation , Penn Provost's Office, \$6,000
2020	President , Penn Biology Graduate Group
	Teece Dissertation Research Fellowship , University of Pennsylvania, \$2,500
	SASGov Research Student Grant , University of Pennsylvania, \$2,000

Organizations & Hobbies

Jan. 2025 – Current	Writing , Flash creative nonfiction and fiction, poetry. Pieces currently out for review.
Aug. 2019 – Sep. 2024	Judo , Penn Judo Club/Main Line Judo Club, Member
